DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Applicant claims the step of removing soluble cytokine receptor molecules until a particular result is observed, but it is unclear how this observation is accomplished—by a machine, patient, practitioner, or other apparatus? Furthermore Applicant's recitation of performing the claimed method "until" a particular event begs the question of what step follows upon the occurrence of the desired event. Accordingly, the claim does not set forth clear boundaries to the method.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0 184 040 B1 to Lentz.

In the specification and figures, Lentz '040 discloses the method substantially as claimed by Applicant. In particular, Lentz '040 discloses the steps of removing a patient's blood, removing a particular undesired fraction, thereby inducing an immune response (see p3, lines 5-23). Lentz does not specifically disclose the step of removing soluble cytokine receptors. However, it is known in the art that cytokines mediate immune response, with some cytokines exhibiting cytotoxicity to cancerous tumors. It is also known in the art that receptor molecules often attach to and mute the activity of the targeted cell. As such, removal of receptor molecules results in a greater number of circulating cytokines. It is the position of the Examiner that Lentz '040 suggests the method as claimed by Applicant, and one having ordinary skill in the art at the time of invention would have been motivated to modify the method disclosed by Lentz to remove the desired cell fraction in order to induce the desired immune response.

With regard to claim 2, Lentz discloses that the tissue to be treated may include a tumor.

With regard to claims 3-4, Lentz discloses that the treatment may be performed on a single or multiple occasions.

Allowable Subject Matter

6. Claims 5, 6, and 8-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: The cited prior art teaches the general concept of removing cells to induce an immune response, but fails to disclose or suggest the particular molecules removed or the manner in which they are removed.
